GUIDENCE - DIPAK SIR

INTRODUCTION

A Grocery Management System is a database-based application designed to manage the daily operations of a grocery store.

It helps store owners and employees to add, update, and track grocery items, customers, and billing records easily.

The system replaces the traditional manual record-keeping method with a computerized solution, saving time, reducing errors, and improving efficiency in store management. A Grocery Management System is a database-based application designed to manage the daily operations of a grocery store.

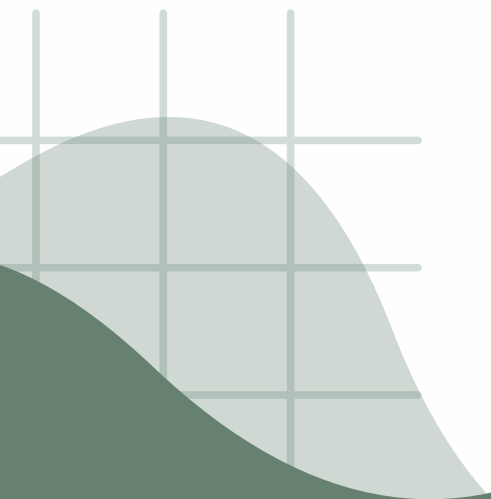

It helps store owners and employees to add, update, and track grocery items, customers, and billing records easily.

The system replaces the traditional manual record-keeping method with a computerized solution, saving time, reducing errors, and improving efficiency in store management.

PROBLEM STATEMENT

In the existing manual system, grocery store data such as product details, stock, and billing are recorded on paper. This process is time-consuming, prone to human errors, and difficult to update. It becomes hard to track inventory, generate reports, and maintain accurate records efficiently.

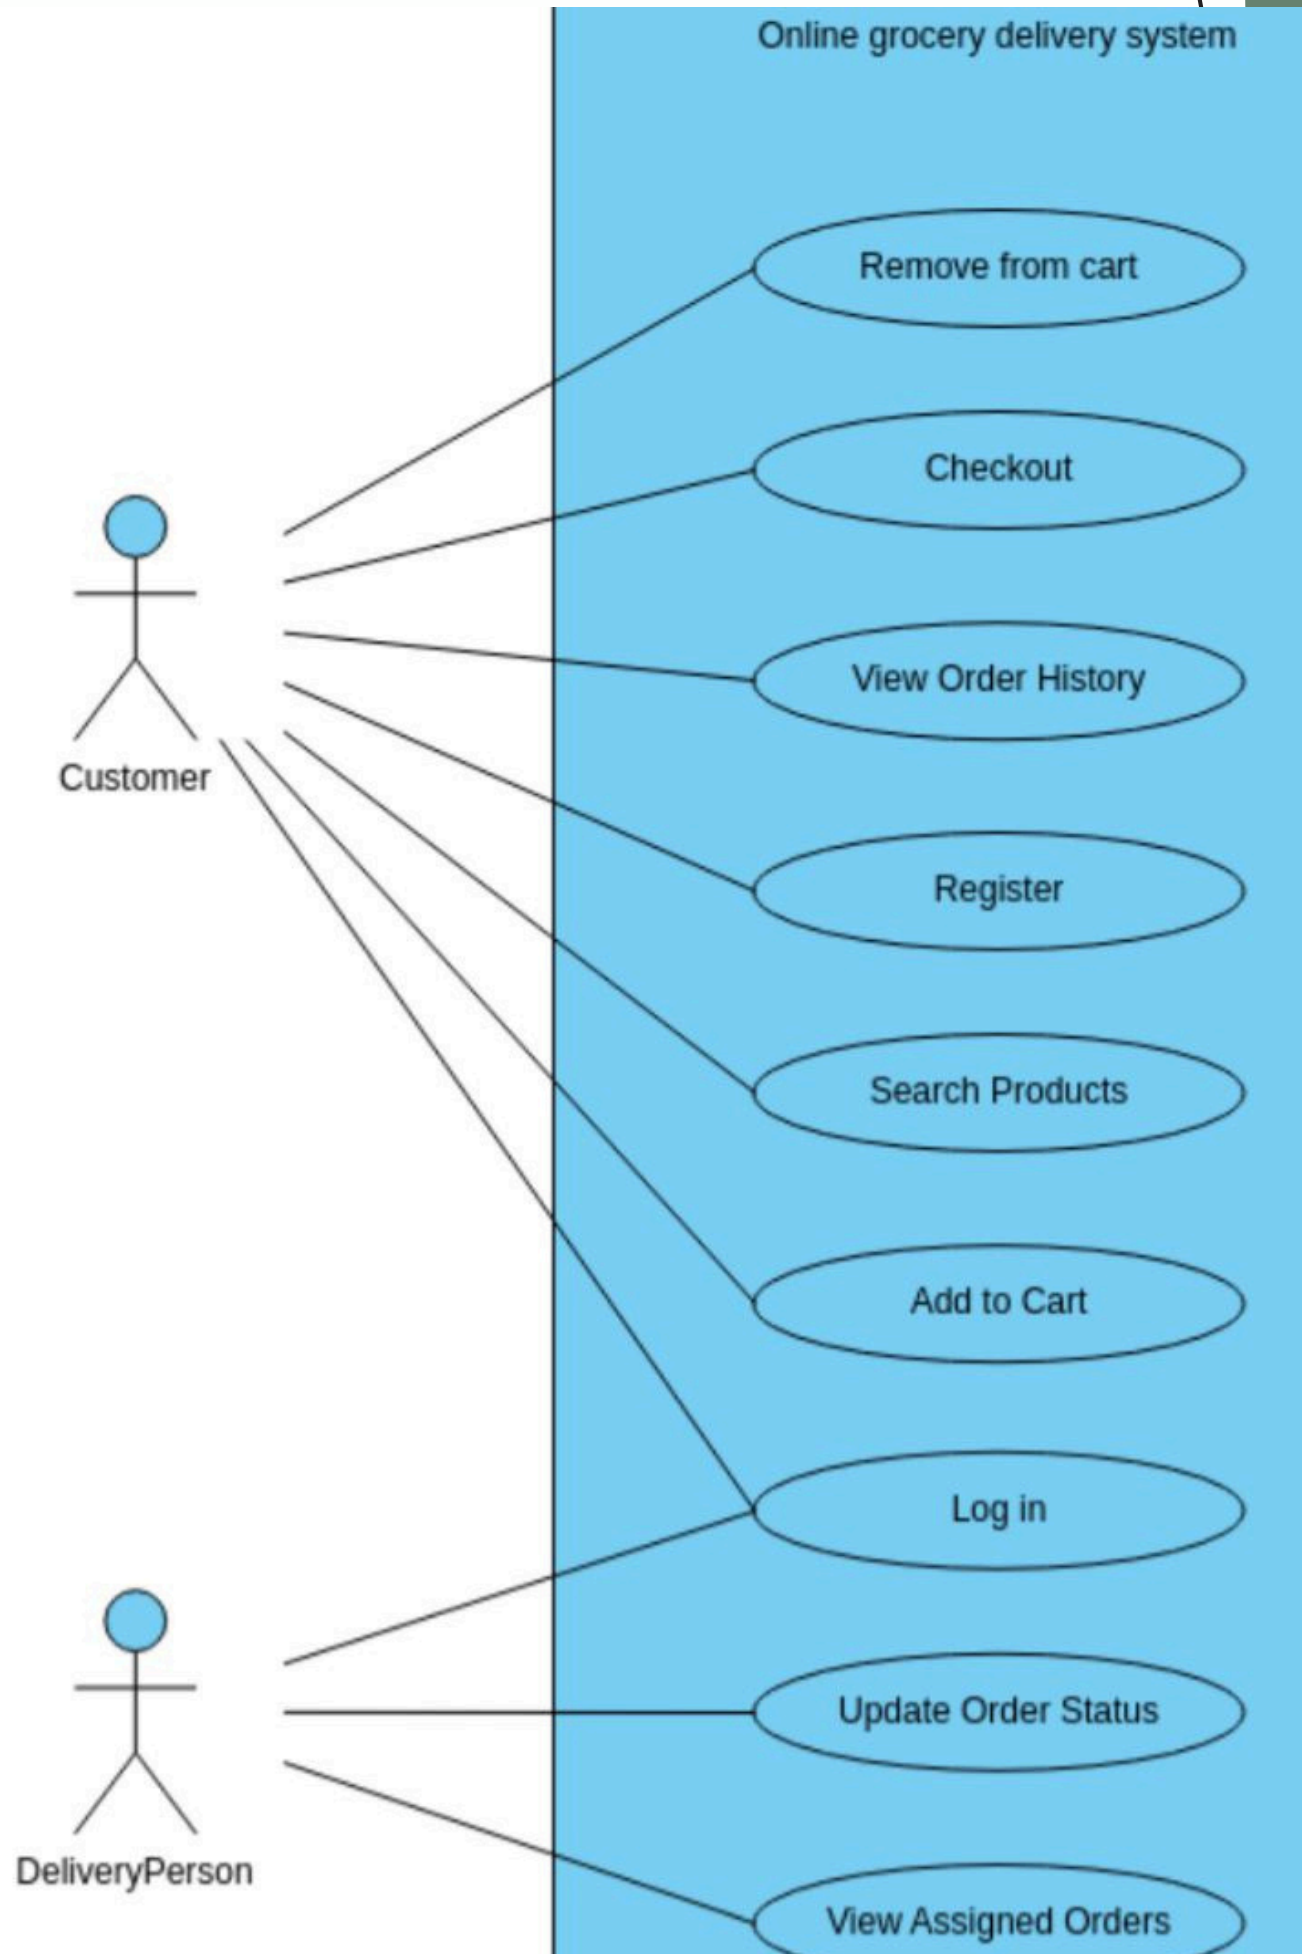

OBJECTIVES

- To store and manage grocery details in a database efficiently.
 - To automate billing, stock updates, and report generation.
 - To reduce manual errors and save time.
 - To make data retrieval easy, fast, and accurate.
 - To provide a user-friendly interface for store management.

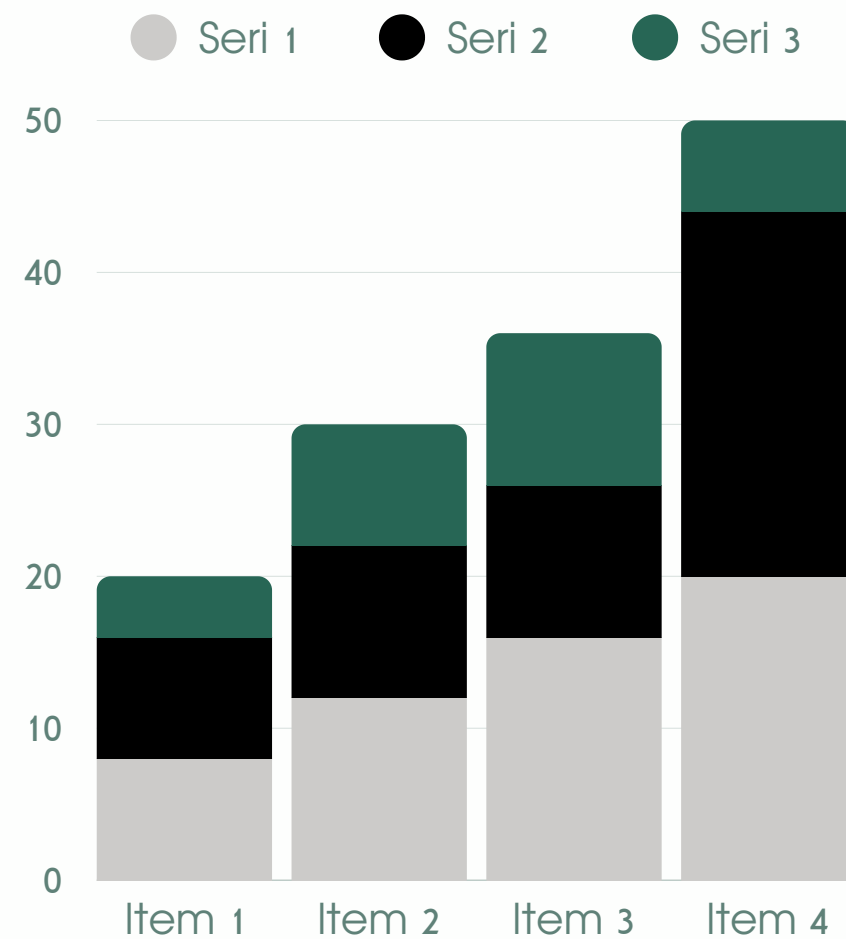

REQUIREMENT SPECIFICATION

- Product Management
 - Add, update, and delete product records (SKU, Category, Price, Supplier).
 - Manage product pricing, discounts, and tax rates.
 - Track Expiration Dates for perishable goods.
- Inventory Control
 - Track current stock level in real-time.
 - Automatically decrement stock upon sale.
 - Generate Low Stock Alert when stock hits reorder point.
- Sales & Billing
 - Create and finalize Point-of-Sale (POS) transactions.
 - Support multiple payment modes (cash, card, online).
 - Generate and print customer receipts.
- Supplier & Purchase Management
 - Add, update, and delete supplier records.
 - Record incoming stock (purchase orders/receiving) to update inventory.
- Reports & Analytics
 - Generate Daily/Monthly Sales Reports (Total Revenue, Transaction Count).
 - Provide graphical dashboards for admins showing sales trends.
 - Generate Near Expiry Stock Report.
- Login & Security
 - Provide Different access levels (Admin/Manager, Sales Staff).
 - Password encryption and data security.

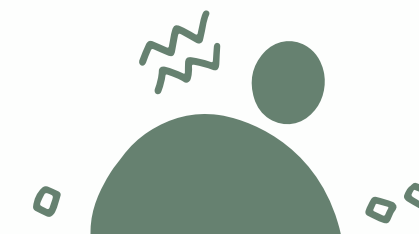

SYSTEM DESIGN

The process of planning the architecture of the software, defining its components, and establishing how data flows between them.

- DESIGN CONSTRAINTS

Add Product

Product Name:

Price:

Add Product

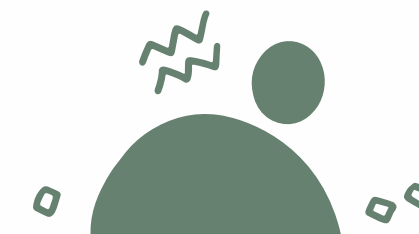

Product "Medimix" added successfully!

- **Main Steps:**

- Start
- Login / Authentication (Admin / Sales Staff / Customer)
- Admin
- Manage Products (Add/Edit/Delete/View)
- Manage Suppliers
- Manage Categories
- View Reports (Sales, Inventory, Near Expiry)
- Sales Staff / Cashier
- Process Sale / Billing

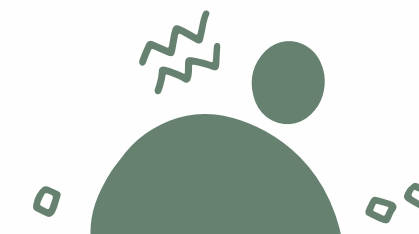

- View Basic Inventory
- Accept Payment
 - Customer
- Register / View Profile
 - Search Products
- Add to Cart / Checkout
 - View Order History
- System Updates Database
- Generate Reports
- End / Logout

IMPLEMENTATION DETAILS

- **SOFTWARE:** MYSQL, (FRONTEND), WINDOWS OS.
- **OPERATING SYSTEM:** WINDOWS 10 / LINUX UBUNTU
- **DATABASE MANAGEMENT SYSTEM (DBMS):** MYSQL / ORACLE / POSTGRES SQL
- **PROGRAMMING LANGUAGE:** SQL FOR DATABASE QUERIES
- **FRONTEND (OPTIONAL):** /HTML / JAVA / PHP / .NET FOR USER INTERFACE
